The Victory Seed Company

P.O. Box 192

Molalla, Oregon 97038

<http://www.VictorySeeds.com>

Welcome to Victory Seed Company 1999 Vegetable Seed Catalog.

We have also included our herb seed list as an insert in the center of the catalog.

The mission of our company is to provide you, our friends and customers, with the highest value for your money -- reasonable prices, high quality product, and responsive customer support. We want your gardening experience to be positive and fruitful. If you are successful, we are successful.

We hope that you will give us a chance to prove ourselves as a company worthy of your seed business.

About Us

Our farm is located in the beautiful [Willamette Valley of Oregon](#). This soil has sustained our family for five generations -- through world wars, global economic collapse, societal unrest, and natural disasters. We believe that with proper stewardship, the farm will continue to provide sustenance for many more generations.

Three generations are now living on the property and actively involved with the farm. Since coming to America in the 1600s, the 13 generations of my paternal lineage have been farmers, either exclusively, or in conjunction with a trade. Farming is a family tradition.

Although we are not presently open to the public, we have a plan for a demonstration farm, set in the historical context of the turn of the 20th Century, which we hope to open during the Summer 2000 season.

Our Farming Philosophy

We believe that we are to be good stewards of all that we have been given responsibility over.¹ It is obvious to us that we cannot possess anything. We simply take care of it for our children -- as our ancestors have done for us. On this basis we believe in *sustainable agriculture* and the use of non-chemical or *organic farming* practices.

"Do not harm the land, or the sea, or the trees . . . " **Rev. 7:3**

We believe that the diversity of plant life on our planet is quickly shrinking and that it should be of great concern to all. Plant hybridization programs are threatening the number of the varieties that farmers are able to grow. There is also great concern with the ability, through biotechnological practices, to genetically encode a "*terminator gene*" (a gene that effectively kills the seeds) into the seed supply, ensuring a dependence on the large seed producers.

We are therefore dedicating ourselves to promoting [open-pollinated](#) (non-hybrid) varieties of [vegetable](#), [herb](#), and [flower](#) seeds, and working towards the protection of our genetically diverse agricultural heritage. We truly believe in teaching these principals to all who have ears to learn.

1. "The Lord God took the man and put him in the Garden of Eden to work it and take care of it."
Genesis 2:15

This publication is [Copyright © 1999](#) Victory Seed Company -- All rights reserved
Victory Seeds™ is the property of Victory Seed Company

Our Seeds -- We strive to provide you with the best quality, [open-pollinated](#) and [heirloom](#) varieties available. Our seeds meet or exceed industry and regulatory standards. We are a licensed seed dealer by the State of Oregon (ODA License #149336).

Our Packaging -- In designing the packaging for our packet seed line, we wanted to provide a product that people would recognize, appreciate, protect the seeds, and yet not be cost prohibitive. We decided on a packet configuration that meets these requirements.

We use a standard paper envelope, similar to what you are used to, but as gardeners ourselves, wanted a way to reseal and protect the unused quantity of seeds for later use (see seed storage page). We chose to accomplish this by the addition of an inner 2 mil reclosable polyethylene bag.

Ordering Instructions

Please fill out the form, including an email address and / or telephone number (so that we can contact you with questions regarding your order) and payment in full. You can mail them to:

The Victory Seed Company
P.O. Box 192
Molalla, Oregon 97038

You may also fax to 503-829-3126 or email (orders@VictorySeeds.com) your order and then mail the payment. We will get your order filled and mail it upon receipt of payment.

Business Hours

Our standard business hours are Monday through Friday from 8:00 a.m. until 5:00 p.m. PST. Depending on the time of year, we may be in the office after hours filling orders or out in the fields and gardens. Electronic mail tends to be the most efficient way for us to handle general communications. Please use inquiries@VictorySeeds.com for checking on the status of an order.

Payment Terms

Full payment is due with each order. We will accept checks or money orders. No cash or stamps through the mail, please. Returned checks will carry a \$25.00 service fee.

We are determining the cost effectiveness of adding payment by Visa and MasterCard –

We are struggling a bit with the idea of accepting credit cards. In this electronic economy, the use of "plastic" has nearly become a necessity. On the other hand credit, and the vicious cycle of debt that some people get trapped into, cause our dilemma. There is also the economic factor. Ever transaction yields several percentage points to the credit clearing house. That means that either the business or the customer pays. It usually means that cost of goods sold increases and results in a higher product cost for all. [Let us know](#) you feelings on the subject.

Prices

We are making our best effort to keep our operating costs low so that we can offer our high quality seeds at the lowest possible prices. You will probably still be able to find packets of seeds cheaper on discount racks, but compare the weight, storage conditions, and germination guarantees before buying. All prices in this catalog are subject to change without notice, but we will not change our price unless absolutely necessary. Orders will be invoiced at the price prevailing at the time of shipment.

Backorder Policy

All items will be backordered unless the item is sold out or not available as a result of a crop failure. Unless customer notifies the Victory Seed Company, all backorders shall be shipped. If you are interested in substitutions, let us know. If payment is over the amount which is filled, the difference under \$10.00 will be credited to you in the form of a gift certificate to be applied towards your next purchase. Overages in excess of \$10.00 will be reimbursed. Items can generally not be added to a backorder.

Delivery -- Please allow 10 - 15 business days for delivery.

\$00.01 - \$20.00 = \$2.75 shipping & handling

\$20.01 - \$40.00 = \$3.75 shipping & handling

\$40.01 - \$59.99 = \$5.00 shipping & handling

Handling for all seed orders \$60.00 and above are free of charge. Some heavy hard good items may carry additional shipping charges. Where this applies, it will be duly noted. We will normally ship by first class, priority mail, or UPS. Please include a street address for delivery.

Delays in Delivery

The Victory Seed Company shall not be responsible for loss or damage caused by delays in delivery from strikes, acts of war, fire, casualty, inability to obtain materials or other causes beyond our control.

International Sales (Outside Continental United States)

Due to varying postal rates and custom regulations, special rates and billing will be applied.

Return of Merchandise

Victory Seed Company cannot accept the return of any opened seed packages or goods. The product would have to be destroyed and frankly, we could not keep our reasonable prices and would probably not be in business very long! Proper authorization and shipping instructions are required before returns are accepted. Unauthorized returns will be refused and sent back at the customer's expense. No returns will be accepted after 90 days from time of invoicing. A 25% restocking fee will be charged on all returns. All returns must have proper authorization code on package before return is valid. All special orders cannot be returned and will not be accepted.

Claims

We are not responsible for damage after our delivery to the carrier. All claims for storage and damage must be reported to the carrier immediately and filed with the carrier by the customer.

Our Warranty and Limitation of Liability

In lieu of all other warranties, expressed or implied and all other obligations or liabilities, we warrant to the extent of the purchase price, that the seeds which we sell are as described by us on our package, within recognized tolerances. Our liability, whether contractual, for negligence or otherwise, is limited in amount to the purchase price of the seeds under all circumstances and regardless of the nature, cause or extent of the loss, and as a condition to any liability on our part, we must receive notice by registered mail for any claim that the seeds are defective within 30 days after the defect of the seeds become apparent. Seeds not accepted under these terms and conditions must be returned at once in their original unopened containers and the purchase price will be refunded. Notwithstanding the above, all claims shall be submitted within 120 days of invoice date. All claims shall be submitted with the original Victory Seed Company packaging. (*Sorry for the legal mumbo jumbo, but it is sadly necessary*).

Recommendations

All recommendations made by us are compiled from recognized horticultural sources. We are not responsible for damage or failure because of any recommendations given by Victory Seed Company personnel.

Descriptions and Illustrations

The plant descriptions in this catalog have been prepared from our observations, supplier reports and other trial or experimental situations. Illustrated specimens have been grown and photographed under favorable conditions. Although they describe what has been observed and documented, they do not necessarily predict what can be expected under your specific growing circumstances. Variation from the color shown in our catalog can be expected. This variation can result from film, printing ink, Web page or computer display differences, and other catalog production techniques, as well as soil, climate and other plant growing conditions.

Vegetable Garden
Seeds

VICTORY SEEDS™

Artichoke and Cardoon

Packet -- 1 gram (approx. 15-20 seeds)

Green Globe Artichoke

Attractive, ornamental perennial with edible flower buds. An excellent delicacy cooked and served hot with melted lemon-butter (some of my family likes to dip in mayonnaise). The plant will require winter protection if you live in a zone that experiences severe freezing.

Packet -- \$ 2.25

Cardoon

A relative of the artichoke, the growing characteristics are similar. However, instead of consuming the flowers, like you do with an artichoke, the thick, fleshy leaf bases, hearts and roots are eaten. They have a slightly spicy, celery-like flavor. They should be wrapped in paper and have dirt mounded around them to overwinter. Harvest is enjoyed beginning in early summer.

Packet -- \$ 2.25

Asparagus

Asparagus is not a plant to grow if you are looking for a fast reward. When started from seed, you probably will not enjoy your first crop for 3 growing seasons. It is well worth the wait!

Start the seeds indoors or in a greenhouse 60 to 90 days prior to your last expected frost date. Direct seeding is not recommended. The plants like to grow deep roots, therefore well drained, heavily composted soil is required. Asparagus likes to be fed -- manure and compost are very important to successful crops.

Sampler -- 2 gram

Packet -- 7 grams

Martha Washington

Perennial -- A popular standard variety. Loam soil is the best soil for raising asparagus.

Sampler -- \$ 1.75

Packet -- \$ 3.45

Beans

(*Phaseolus*)

Sampler -- 1 ounce	Packet -- 2 ounces
--------------------	--------------------

Ask about bulk quantity pricing

Pole Beans (Climbers)

Kentucky Wonder

58 - 70 Days -- A green pole bean. Very reliable, early maturing, and productive. It can be enjoyed fresh, canned, dried, or frozen.

Sampler -- \$ 1.25

Packet -- \$ 1.95

King of the Garden Lima

70 Days -- A very popular, old fashioned lima bean. The pods contain 4 or 5 cream colored flat beans each. Recommended for dry lima crop.

Sampler -- \$ 1.25

Packet -- \$ 1.95

Carolina or Sieva Lima

70 Days -- Very popular in the south. The small pods (3 - 3 1/2 inches) contain 3 or 4 small flat beans. [Note: Limited availability]

Sampler -- \$ 1.25

Packet -- \$ 1.95

Bush Snap Beans

Roma

53 days -- Broad, flat pods that are grayish green in color. Very tasty fresh and retains flavor after processing.

Sampler -- \$ 1.25

Packet -- \$ 1.95

Blue Lake 274

58 days -- A bush version of the popular climber. A "*flavor-ite*" of ours. The pods develop to 5 1/2 to 6 1/2 inches in length. This is a canner's favorite as the variety tends to mature its heavy crop all at once.

Sampler -- \$ 1.25

Packet -- \$ 1.95

Derby

57 days -- Long pods that stay tender up to 7 inches long! Upright plants and pods that easily slip from their [pedicels](#) describe this variety and make it easy to harvest.

Sampler -- \$ 1.50

Packet -- \$ 2.35

Beets

(*Beta vulgaris*)

The two varieties that we are offering this year have been around for some time. Beets, however, seem to be a relatively recent vegetable. With no firm records of their existence before the 1600s, what we call a "*beet*" was known as a "*Blood Turnip*" until the late 1880s.

Because the plant has a long tap root, beets like well worked, loam soil. Plant in July for a fall or winter harvest. The plants like light but not the heat (heat tends to make them stringy and tough). If the soil is too rich, you may experience forked roots or plants that go to seed.

Since beets tend to toughen as they mature, table varieties can be eaten raw, canned, pickled, baked or boiled.

Sampler -- 2 grams	Packet -- 6 grams
--------------------	-------------------

Detroit Dark Red

58 days -- Introduced in the United States in 1892, the Detroit Dark Red is said to be the most popular garden variety today. Its origin are based in the European Early Blood Turnip. Very good right out of the garden, canned or pickled. Globe shaped, excellent color, sweet, smooth and tender.

Sampler -- \$ 1.30

Packet -- \$ 3.05

Early Wonder Tall Top

55 days -- This variety yields crimson-red flesh with flattened globe-shaped roots and tall, bright, dark green succulent tops. You can use the tender leaves for greens and the dark red roots for salads, pickled, borsch or cooked. Originally introduced to the United States in 1811.

Sampler -- \$ 1.30

Packet -- \$ 3.05

Broccoli

(Brassica oleracea var. botrytis)

Broccoli is a cool weather crop. Start seeds inside in the early spring for a summer crop and in late summer for a late fall crop. Transplant outdoors when the plants have developed 4 or 5 leaves or directly in warm, moist soil.

Sampler -- 0.5 grams	Packet -- 2 grams
-----------------------------	--------------------------

(Approximately 250 - 350 seeds per gram)

Calabrese, Green Sprouting

70 days -- Produces bluish green, 3 to 5 inch heads. 30 - 36 inch tall, erect, leafy plants.

Sampler -- \$ 0.95

Packet -- \$ 2.95

Brussel Sprouts

(Brassica oleracea var. gemnifera)

Brussel Sprouts require the same basic culture as broccoli. They are generally very winter hardy.

Sampler -- 0.5 grams	Packet -- 2 grams
-----------------------------	--------------------------

(Approximately 250 - 350 seeds per gram)

Long Island Improved

85 - 110 days -- Closely set, tight, dark green, 1 1/2 inch sprouts grow on a 20 inch tall plant. This is a standard old variety.

Sampler -- \$ 1.05

Packet -- \$ 3.25

Cabbage

(Brassica oleracea var. capitata)

Sampler -- 0.5 grams	Packet -- 2 grams
-----------------------------	--------------------------

(Approximately 250 - 350 seeds per gram)

Early Jersey Wakefield

60 - 75 days -- This variety has been grown in the U.S. since the 1830s and has its origin in England in the late 1700s. An early variety, it is generally grown for a summer harvest but does overwinter well. The plant is short stemmed and yields conical, 7 inch in diameter green heads with a fine tender flavor.

Sampler -- \$ 1.05

Packet -- \$ 3.25

Mammoth Red Rock

90 days -- It is well adapted for most growing conditions and yields large (4 - 7 pound), red, solid, round heads that have fine flavor and keeps well. Great raw, cooked, or pickled. Nice deep color.

Sampler -- \$ 1.05

Packet -- \$ 3.25

(Daucus carota)

Sow as early as the ground can be worked, direct in rows, 12 to 18 inches apart. Make successive plantings until August first. The carrot fly can be a nuisance insect but planting Sage nearby can help to repel the insect. Generally, the brighter the orange color, the higher the content of Beta Carotene and vitamins. Breeders began developing orange carrots about 400 years ago -- before that time they were purple in color and considered undesirable.

Sampler -- 1 gram	Packet -- 4 grams
--------------------------	--------------------------

(Approximately 650 - 750 seeds per gram)

Chantenay Red Cored

70 days -- This variety, originally developed in France in the 1830s, stump rooted, 5 to 5 1/2 inch long, tender, sweet, and bright orange roots.

Sampler -- \$ 1.75
Packet -- \$ 3.95

Carrots (con't)

Nantes Scarlet

68 days -- Outstanding for flavor, this strain has a strong top with 4 - 5 inch semi-tapered roots.

Sampler -- \$ 1.75
Packet -- \$ 3.95

Danvers Half Long

75 days -- Taper to a blunt point about 6 - 7 1/2 inches in length. It also stores well.

Sampler -- \$ 1.75
Packet -- \$ 3.95

Thumbelina

70 days -- This is the perfect variety for those of you with heavy soils. The Thumbelina is an All American Winner that under normal conditions, grows round, sweet-gourmet carrot about the size of a golf ball.

Sampler -- \$ 1.75
Packet -- \$ 3.95

(Brassica oleracea var. botrytis)

Sampler -- 0.5 grams	Packet -- 2 grams
-----------------------------	--------------------------

Early Snowball

55 days -- Well suited for greenhouse forcing or frames. Uniform maturing, smooth, pure white heads weighing 3 - 5 pounds and 6 inches across. It is a medium sized plant with good leaf coverage.

Sampler -- \$ 1.05
Packet -- \$ 3.25

Celery & Celeriac

(Apium graveolens)

One gram of seed will produce about 250 plants. Sow in February or March. Soak seeds 3 - 5 days before sowing and after sowing, cover the seeds lightly with media. The seeds need darkness to germinate.

Celery and Celeriac grow under similar conditions, however, celeriac is not tolerant of cold weather and must be harvested in the fall and stored in moistened sand in the root cellar like you store carrots.

Sampler -- 0.25 grams	Packet -- 1 grams
------------------------------	--------------------------

(Approximately 250 - 350 seeds per gram)

Celeriac (Rooted or German Celery)

100 days -- Used for flavorings in salads, soups and dressings.

Sampler -- \$ 1.25
Packet -- \$ 3.90

Golden Self-Blanching

90 days -- Stocky, solid, thick, stalks blanching easily. Vigorous growing with upright medium green foliage. The roots are round smooth and have good inner quality with high yields.

Sampler -- \$ 1.25
Packet -- \$ 3.90

Collards

(Brassica oleracea var. acephala)

Collards are cold-hardy plants that are very common in the south. Collards are a type of kale but thrive in heat and can survive down to about 10°F.

In the South, sow in late summer or early fall for winter and spring harvests. In colder climates, when the soil temperatures are between 50 and 80°F, sow in late spring for fall harvest.

Start cutting individual leaves about 65 days from planting and continue harvesting the lower leaves because if they are left on the plant they become tough.

Sampler -- 0.5 grams	Packet -- 2 grams
-----------------------------	--------------------------

(Approximately 250 - 300 seeds per gram)

Georgia (Southern)

70 days -- Traditional Southern variety that is heat and cold tolerant and slow to bolt. Non-heading, juicy blue-green wavy leaves will stand light freezing which improves the cabbage-like flavor. Plants grow 2 - 3 feet tall

Sampler -- \$ 1.05

Packet -- \$ 3.25

Corn

(Zea mays)

In Native American lore, corn was one of the "three sisters". Along with beans and squash, the three sisters were planted and grown together, supporting each other in their lifecycle and providing a very balanced diet of carbohydrates, proteins and vegetable fats to their cultivators.

This native American corn was the genetic foundation of all other corn varieties. Indian corn is rarely grown in the garden today. Most people associate eating corn with modern sweet corn that has a sugar enhancer gene incorporated. Other types of corn can be eaten young like sweetcorn but is usually grown, dried and used for flour and meal.

We are actively looking for sources of heirloom and open-pollinated varieties so please check back often.

Information about the botany of corn can be found at this [Iowa State University Web site](http://www.ag.iastate.edu/departments/agronomy/corngrows.html) at <http://www.ag.iastate.edu/departments/agronomy/corngrows.html> .

(Note: We are actively finding additional varieties. Please check our Web site at <http://www.VictorySeeds.com> for new listings.)

Sampler -- 0.5 ounce	Packet -- 1 ounce
-----------------------------	--------------------------

(Approximately 150 - 250 seeds per gram)

Red Strawberry Popcorn

105 days -- Popular for drying, the cobs are strawberry shaped and rich, deep-red color. The four foot tall plants are highly ornamental and an excellent choice for an edible landscape planting.

Sampler -- \$ 1.85

Packet -- \$ 2.85

Rainbow ("Indian" corn)

110 days -- This open pollinated variety has great colors for drying.

Sampler -- \$ 1.85

Packet -- \$ 2.85

Cucumbers

(*Cucumis sativus*)

Sampler -- 1 gram	Packet -- 2 grams
-------------------	-------------------

(Approximately 25 - 30 seeds per gram)

White Wonder

60 days -- Popular for slicing and pickling. Fruit is normally 4 - 6 inches long and a natural white color.

Sampler -- \$ 1.25

Packet -- \$ 1.95

Boston Pickling

55 days -- Medium green fruits. This black spined pickling cucumber produces a very heavy yield of attractively warted fruits.

Sampler -- \$ 1.25

Packet -- \$ 1.95

Lemon Apple

60 days -- Vigorous and productive variety that produces fruits about the size and color of a lemon. Flesh is crispy white, sweet, and burpless. Use the tops for salads or pickling. Fruits are ripe when first starting to turn yellow, but can be used green or ripe.

Sampler -- \$ 1.75

Packet -- \$ 2.75

Eggplant

(*Solanum melongena* var *esculentum*)

Sampler -- 0.25 grams	Packet -- 1 grams
-----------------------	-------------------

(Approximately 200 seeds per gram)

Black Beauty

80 days -- Broad, dark purple egg-shaped fruits that range between 4 to 6 inches that are borne well off of the ground on medium sized plants.

Sampler -- \$ 1.25

Packet -- \$ 3.90

Endive

(*Cicorium endiva*)

Endives and Chicory will cross-pollinate so you will need to keep at least 500 feet distance between plantings if you intend to save seed.

Tie outer leaves if you want to blanch the centers.

Sampler -- 1 gram	Packet -- 4 grams
-------------------	-------------------

(Approximately 900 seeds per gram)

Green Curled Endive

92 days -- A traditional variety for fall and winter harvest.

Sampler -- \$ 1.75

Packet -- \$ 3.75

Kale

(*Brassica oleracea* var. *acephala*)

Kale still grows wild along much of the European coastline, is also known as Borecole, and is a non-heading cabbage. Kale, unlike Collards, is a cool weather crop and not very tolerant of heat.

Sampler -- 0.5 grams	Packet -- 2 grams
----------------------	-------------------

(Approximately 250 - 300 seeds per gram)

Dwarf Green Curled

55 days -- Finely curled, bluish green leaves.

Sampler -- \$ 1.05

Packet -- \$ 3.25

Kohl Rabi

(Brassica oleracea var. gongylodes)

Sampler -- 0.5 grams	Packet -- 2 grams
----------------------	-------------------

(Approximately 250 - 300 seeds per gram)

Early White Vienna

55 days -- The meat of this variety is very sweet and mild, creamy-white in color and tasting like a mild turnip.

Sampler -- \$ 1.75

Packet -- \$ 2.75

Early Purple Vienna

55 days

Sampler -- \$ 1.75

Packet -- \$ 2.75

Leeks

(Allium ampeloprasum)

Sampler -- 0.5 grams	Packet -- 2 gram
----------------------	------------------

(Approximately 350 seeds per gram)

Broad London (American Flag)

130 days -- Thick sturdy stalks with pearly-white bulbs. Popular main season variety.

Sampler -- \$ 1.25

Packet -- \$ 2.85

Lettuce

(Lactuca sativa)

Sampler -- 1 gram	Packet -- 4 grams
-------------------	-------------------

(Approximately 800 seeds per gram)

Black Seeded Simpson

45 days -- Large upright and compact leaf-type lettuce plants with light green, wide curled leaves. Very early, dependable and productive. Very tolerant and bolts slowly.

Sampler -- \$ 1.45

Packet -- \$ 3.25

Melons

Sampler -- 1 gram	Packet -- 2 grams
-------------------	-------------------

(Approximately 30 - 60 seeds per gram)

Hale's Best Jumbo Muskmelon

85 days -- Large, early. Thick, salmon-orange flesh. Oval shaped fruit, heavy netting. 3 1/2 to 5 pounds each.

Sampler -- \$ 2.25

Packet -- \$ 3.50

Sugar Baby Watermelon

84 days -- The best and most popular small or icebox melon around. One of the sweetest and earliest melons with very small seeds. Fairly tough, thin rind which keeps for a long time.

Sampler -- \$ 1.05

Packet (4 gr.) -- \$ 1.95

Growing Peppers: Plant the seeds in sterile potting mix, 8 weeks prior to the last expected frost date in your area (refer to the [Hardiness Zone Chart](#)). Plant seeds at a depth equal to 2 times their diameter. Optimum soil temperature is 80°F. Germination usually occurs in 8 to 18 days but rates tend to be erratic. Try soaking the seed in water for 2 - 3 days prior to sowing for faster germination. The most common cause of poor germination is the result of uneven planting depths.

Transplant outside only after night temperatures average above 55°F. Peppers are tender plants that thrive in warm weather. Blossoms will drop if temperatures drop below 60°F or if they get too much nitrogen.

Hot pepper and the [capsaicin oil](#) in hot pepper **cannot** be neutralized by water. Wash hands or rinse mouth with vinegar to alleviate discomfort in an emergency. Bread, bananas, pasta, or potatoes will also alleviate the burning sensation. Never touch your face or eyes after handling hot peppers. (Warn growing temperatures develop the hottest peppers).

Tobacco users should not come in contact with seedlings to help prevent infection with the tobacco virus.

Sampler -- 0.25 grams	Packet -- 1 gram
-----------------------	------------------

(Approximately 140 seeds per gram)

Sweet Peppers:

California Wonder (Bell Variety)

75 days -- Excellent sweet pepper with 4 x 4 inch fruit. Heavy producer. Thick flesh. Dark green 4 lobed fruit changing to scarlet when mature.

Sampler -- \$ 1.00
Packet -- \$ 2.25

Early California Wonder (Bell Variety)

70 days -- Same as the California Wonder but sets fruit earlier.

Sampler -- \$ 1.00
Packet -- \$ 2.25

Golden California Wonder (Bell Variety)

70 days -- Same as California Wonder but the peppers are a bright gold, changing to orange-red when mature.

Sampler -- \$ 1.00
Packet -- \$ 2.25

Hungarian Sweet (Sweet Banana)

68 days -- The tapering 6 inch x 1 1/2 long fruit is light yellow, maturing to red. Good for pickling.

Sampler -- \$ 1.00
Packet -- \$ 2.25

Pimento Perfection

73 days -- A standard sweet variety for home and market. Heart shaped, smooth fruit 3 1/2 inch by 2 1/2 inch.

Sampler -- \$ 1.00
Packet -- \$ 2.25

Poblano

75 days -- Slightly hot with a sweet flavor. Dark green 6 inch by 3 inch fruits mature to a chocolate-green color. Thick walled fruits are ideal for fresh use, stuffing, roasted, and used in rellenos or dried as "ancho".

Sampler -- \$ 1.75
Packet -- \$ 5.25

Purple Beauty

70 days -- A truly purple pepper. The 4 inch by 3 1/2 inch blocky fruits have thick flesh and is highly productive. An interesting novelty to add color to your salads and cooking.

Sampler -- \$ 1.50
Packet -- \$ 3.85

Sweet Cherry

75 days -- Smooth skin and thick-meat. Sweet flesh shaped like cherries but of good sized. Nice for salads, canning, or pickling; can be used in the green stage or in the ripe stage which is red

Sampler -- \$ 1.00
Packet -- \$ 2.25

Hot Pepper Varieties:

Cayenne, Long Red

70 days -- **HOT** but delightfully pungent in flavor! For pickling, canning or drying. Long, thin, 6 x 1/2 inch green fruits, turning red when mature. Named for the South American river that gives Guyana its name.

Sampler -- \$ 1.25
Packet -- \$ 2.00

Habanero

85 days -- **Very Hot**. Light green, thin crinkled flesh ripens to orange-red. Fruits are 1 1/2 inch long by 1 inch across and about 200 times hotter than Jalapeno! A little slower to germinate.

Sampler -- \$ 2.50

Jalapeno

72 days -- Dark green tapered fruit, 3 inches by 1 inch, turning red when mature. Good for pickling or the fresh market.

Sampler -- \$ 1.00

Packet -- \$ 2.25

Serrano

85 days -- Very hot, pungent fruit, 2 1/2 inches long x 1/2 inches in diameter. Slim, club shaped green peppers with medium thin walls maturing to a bright red color on 30 inch tall plants.

Sampler -- \$ 1.00

Packet -- \$ 2.25

(Cucurbita pepo)

Sampler -- 2 grams

Packet -- 6 grams

(Approximately 10 seeds per gram)

Small Sugar

110 days -- Outstanding for processing and pumpkin pies. The fruit is 6 to 8 inches in diameter and weighs about 6 pounds. The flesh is thick and sweet.

Sampler -- \$ 1.25

Packet -- \$ 2.95

Spinach

(Spinacia oleracea)

Sampler -- 4 grams

Packet -- 0.5 ounce

(Approximately 80 seeds per gram)

Bloomsdale Long Standing

45 days -- Early, dark green, crumpled leaves can be sown in spring or fall.

Sampler -- \$ 1.25

Packet -- \$ 1.95

Squash

(Cucurbita spp)

Sampler -- 3 gram

Packet -- 7 grams

(Seed count varies by type)

Black Zucchini *(about 175 seeds per ounce)*

56 days -- A very productive plant, fruit is green with grayish-black tone. Blocky, smoothly bulbed with open plant habit. Fruit should be picked when 6 1/2 to 7 inches long.

Sampler -- \$ 1.05

Packet -- \$ 1.65

Hubbard Blue *(about 140 seeds per ounce)*

110 days -- Tough-skinned oblong bluish-green fruits weigh 10 to 15 pounds, and the golden yellow flesh is dry with a great flavor.

Sampler -- \$ 2.50

Swiss Chard

(Beta vulgaris)

Sampler -- 1 gram

Packet -- 4 grams

(Approximately 1400 seeds per gram)

Lucullus (Fordhook)

52 days -- This is the most popular variety. Named after the Roman general of the same name. Heavily crumpled with wide, broad white ribs about 20 inches tall.

Sampler -- \$ 1.85

Packet -- \$ 5.25

Growing Tomatoes: Plant the seeds indoors 6-8 weeks prior to the last frost date in your area (refer to the [Hardiness Zone Chart](#)). Plant about 1/4 inch deep, water lightly, and cover with plastic to ensure that they do not dry out.

The tomato seeds germinate best if the soil is between 75-90°F. Full light, and cooler temperatures (60-70°F) will help to prevent the seedlings from becoming too leggy.

Harden off plants before transplanting outside. Be very careful, while transplanting, not to disturb or damage the roots. Young plants are very tender and susceptible to frost damage, as well as sun burn. I protect my young plant by placing a one gallon milk jug, with the bottom removed, to form a miniature greenhouse. A couple of days of special attention like this will help to ensure a high rate of success.

You should avoid giving tomato plants too much nitrogen, especially before the fruit sets. Water evenly and not in excess. Over watering can help to produce larger fruit, but flavor may be reduced.

Selection tips -- *Determinate* types ripen over 3 - 4 weeks and their bushy generally do not need staking. *Indeterminate* continue to grow even after the fruit sets and ripen continuously until a frost arrives.

Tomato Disease Tolerances -- "F" indicates a resistance to Fusarium wilt, "V" a resistance to Verticillium wilt, "N" to nematodes (root knot), "T" to the tobacco mosaic virus, and "St" to Stemphylium (gray leaf spot).

Tobacco users should not come in contact with seedlings to help prevent infection with the tobacco virus.

Sampler - Approx. 30 seeds

Packet - 1 gram

Varieties:

Arkansas Traveler (*pre-1900 Southern Heirloom*)

85 - 90 days, indeterminate -- Creamy, mild flavor, medium sized (approximately 6 oz.). Pink in color.

Sampler - \$1.25

Beefsteak

90 days, indeterminate -- Extra large meaty, ribbed deep scarlet fruit. Weighs about 12 ounces. Fairly soft for easy slicing.

Sampler - \$1.25

Black Krim

80 days, indeterminate -- Brownish-purple to maroon colored fruit with green shoulders, sweet, mild, rich flavor. Fruits weigh approximately 12 oz.

Sampler - \$1.25

Brandywine (*Amish Heirloom*)

88 - 90 days, indeterminate -- Introduced in the late 1880s. It is by far the best known of the heirloom tomatoes. The plant has "potato-leaf" foliage with very large, boat-shaped, reddish, pink fruits averaging between 16 and 24 ounces each. The flavor is exceptional and of gourmet quality. Fruits ripen gradually over the season.

Sampler - \$1.25

Bradley

80 days, semi-determinate -- It is a semi-determinate, short stake type of plant. Pink fruit in the 7 ounce range. Green shoulder.

Sampler - \$1.25

Cherokee Red

80 days, determinate -- Vigorous plants that produce seven ounce, firm, red fruits that are full of meaty flavor. Actually matures from the inside out.

Sampler - \$1.25

Cherokee Purple (*Heirloom type*)

80 days, indeterminate -- A slicer type heirloom. Dusky pink-purple with darker shoulders. Mild flavor.

Sampler - \$1.25

Delicious

77 days, indeterminate -- Huge 1 pound or more fruit. Smooth, red, fairly crack resistant. Solid interior with few seeds.

Sampler - \$1.25

Flora-Dade

74 days, determinate -- This extremely popular market tomato is well adapted to southern humid areas. Flora-Dade offers mid-season fruit with a deep globe shape, is firm, smooth and jointless. It is red at maturity; about 7 ounces on a determinate plant that offers good cover. Flora-Dade has SVF 1 & 2 disease tolerance.

Sampler - \$1.25

German Johnson (Heirloom)

85 days -- Large, low acid reddish-pink fruits. Tall plants with "potato-leaf" foliage. The plant was named after Robert Gibbon Johnson in 1820 after he ate a tomato, in public, in New Jersey. He attempted to greatly encourage the public acceptance of the fruit as not being toxic or poisonous.

Sampler - \$1.25

Giant Belgium Pink

85 days, indeterminate -- Sweet fruits averaging 1 to 2 pounds. Dark pink fruits with smooth ends. Low acid, mild flavor.

Sampler - \$1.25

Giant Tree or Italian Potato Leafed

88 days, indeterminate -- A fine, large tomato. The vines, trained on stakes, tower 7 or more feet in height.

Sampler - \$1.25

Glamour

74 days, indeterminate -- Glamour has red 6 oz. fruit that is almost globe-shaped, solid and crack resistant. Does great in the Northeast and the Midwest U.S.

Sampler - \$1.25

Heinz VF

75 days, determinate -- Early bright red crack resistant fruit. Heavy yielder with Fusarium and Verticillium disease resistance. Determinate bush habit.

Sampler - \$1.25

Hillbilly

85 days, indeterminate -- Mild flavor. Large orange-yellow fruits with red streaks weighing around 16 oz.

Sampler - \$1.25

Homestead

80 days, determinate -- The fruit set under a wide range of conditions, making it popular the world over. Produces 7 - 8 ounce red fruits that are consistently uniform.

Sampler - \$1.25

Jubilee

75 - 80 days, indeterminate -- The 8 ounce fruit is bright orange colored, solid, smooth, sweet, meaty flesh and non-acid. The plants, although indeterminate, tend to be short-stemmed and stiff. They make a unique and attractive tomato juice.

Sampler - \$1.25

Long Keeper

78 days, indeterminate -- The fruit skin is light orange-red with a medium red flesh when ripe. Will stay fresh in storage 6 - 12 weeks after picking.

Sampler - \$1.25

Marglobe Supreme

75 days, indeterminate -- Developed in New Jersey in 1917 by crossing Marvel and Globe. One of the first disease resistant strains with a good resistance to Verticillium and Fusarium wilt. Red fruit; smooth and solid 6 ounce fruit that is crack resistant.

Sampler - \$1.25

Mortgage Lifter

79 days, indeterminate -- This has been a popular variety since it was developed in the '30s. The legend of this tomato is that it was developed by M.C. Byles of Logan, West Virginia. For six years he crossed German Johnson, Beefsteak, English and Italian varieties, selecting the largest specimens. It is said that he then sold plants for \$ 1.00 each and paid off his mortgage in six years. The fruits are large, pink, over a pound each and one of the best beefsteak flavors available.

Sampler - \$1.25

Mountain Gold

A yellow-fruited tomato superior in disease resistance, plant habit and certain fruit characteristics to standard cultivars. Released in 1991. Developed by Dr. Randy Gardner at the North Carolina State Mountain Horticultural Crops Research Station. Not a hybrid.

Sampler - \$1.25

Mr. Stripey (Heirloom)

80 days -- Yellow beefsteak type fruit with red-streaked flesh. Large flavorful fruits range from 14 ounces to 3 pounds!

Sampler - \$1.25

Napoli

75 days, indeterminate -- The fruits are about three ounces in weight and are pear shaped.

Sampler - \$1.25

Old German

85 days, *indeterminate* -- The fruits are large, often weighing more than 16 ounces. Color is golden yellow, striped with pink and red going through to the core. Should be staked.

Sampler - \$1.25

Oxheart

90 days, *indeterminate* -- Extra large, heart-shaped reddish-pink fruit, few seeds, mild flavor. Fine variety. Non-acid. The plants are vigorous with soft, feathery foliage.

Sampler - \$1.25

Pineapple Golden

75 days -- These orange fruits with a pink stripe are an heirloom from the Ohio area and have great cover. Fruits weigh between 12 and 16 ounces.

Sampler - \$1.25

Ponderosa - pink

88 days, *indeterminate* -- Large, purplish pink fruit, mild flavor.

Sampler - \$1.25

Ponderosa - red

88 days, *indeterminate* -- Large, red fruit, mild flavor.

Sampler - \$1.25

Rutgers (The legendary "Jersey" Tomato)

75 days, *determinate* -- An improved, disease resistant strain. Fruit is 6 ounce, bright red; globular, slightly flattened with smooth, thick walls that are crack resistant. It was originally introduced in 1934. It is a cross between J.T.D. and Marglobe. Good for slicing and cooking.

Sampler - \$1.25

Siberia

48 - 50 days, *determinate* -- Early, bright red fruits weighing up to 5 oz. Capable of setting fruits at 38°F, however, Siberia is not frost hardy. Rumored to have been smuggled out of Russia in 1975.

Sampler - \$1.25

Sunray

75 days, *indeterminate* -- Large, golden 7 oz. fruit on indeterminate plants. Fusarium resistant.

Sampler - \$1.25

Super Beefsteak

80 days, *indeterminate* -- Very meaty, large red fruits on prolific, vigorous plants. Fruits average 17 ounces.

Sampler - \$1.25

Traveler 76

78 days, *indeterminate* -- Heat and drought resistant. Good flavor, 6 ounce fruits. Dark pink when mature.

Sampler - \$1.25

White Wonder

80 - 90 days, *indeterminate* -- Mild, sweet flavored with high sugar content. White inside and out when matured. Fruits are small to medium-sized on bushy leafy plants. Good for slicing and canning.

Sampler - \$1.25

Yellow Pear

78 days -- Yellow pear shape.

Sampler - \$1.25

Yellow Stuffer

76 days, *indeterminate* -- Yellow fruited stuffing tomato. The vine is indeterminate, tall and vigorous. At first glance the fruit looks like yellow bell peppers.

Sampler - \$1.25

Paste Types**Roma VF**

75 days, *determinate* -- This open-pollinated, pear shaped 2 ounce fruit, ideal for paste or puree. Fusarium and Verticillium resistant. Determinate bush habit.

Sampler - \$1.25

Salsa

70 days, *determinate* -- A solid maturing fruit that matures early and weighs about 6 ounces.

Sampler - \$1.25

Small Fruited Varieties:

Baxter's Early Bush Cherry

65 days -- Early, bush habit, large, cherry type fruits that will keep for up to 28 days when refrigerated, even though picked ripe.

Sampler - \$1.25

Red Cherry - Small

Pinkish - red fruits are oval and have plenty of flavor. Plants are compact and great for home gardens and hanging planters.

Sampler - \$1.25

Red Pear

70 days -- Red pear shaped tomato weighing 1/2 ounce.

Sampler - \$1.25

Tiny Tim

45 days, dwarf -- Only grows 10-12 inches tall and 14 inches across. A heavy yielder with clusters of fine flavored fruit. Can be grown in a potted plant anytime of the year.

Sampler - \$1.25

Tomatillo:

Tomatillo (*Physalis ixocarpa*)

70 days -- Very popular, but sometimes rare in the supermarket. The 2 to 3 ounce fruits are used in salsa or picante dishes. Harvest when fruits are green and before turning yellow. Remove the thin husk before using or consuming.

Sampler - \$1.25

(Brassica napus)

Sampler -- 0.5 grams

Packet -- 2 grams

(Approximately 250 - 300 seeds per gram)

Purple Top White Globe

52 days -- Round roots that are bright purple on the upper part and white below. Grow 4 - 5 inches in diameter but best when harvested a little smaller

Sampler -- \$ 1.05

Packet -- \$ 3.25
